ABSTRACT

Notes on the names of the Odonata, including the related fossil forms, are arranged in a **twelve-part catalogue**. **Part I** is an alphabetical list of the Type-Genera of the Family-Group names. **Part II** is a synonymic list of the Family-Group names. **Part III** is an alphabetical list of the Genus-Group names, including data on authorship, place of publication, type-species, method of type-species designation and position in the classification. **Part IV** is a synonymic list of the Genus-Group names. **Part V** is an index to the authors and bibliography of the Genus-Group names. **Part VI** is an alphabetical index to the Type-Species of the Genus-Group names. **Part VII** is an alphabetical list of the Species-Group names, including data on authorship, place of publication, type locality, location of type specimans and classification. **Part VIII** is a synonymic list of the Species-Group names. **Part IX** is an index to the authors and bibliography of the Species-Group names. **Part X** is the bibliography, including information on the author's place and date of birth and death, and on the whereabouts of their collections. **Part XI** is an index to the bibliography by journal title, including the full titles of the journals and serials, and information on their places and dates of publication. **Part XII** is an index to the bibliography by year of publication. **Appendix I** is a list of Genus-Group names that need work. **Appendix II** is a list of Species-Group names that need work. **Appendix III** is a list of Bibliography citations that need work.

The arrangement of the names in based entirely on bibliographic references. No specimens have been examined, and no new names are introduced.

INTRODUCTION

Zoological nomenclature is the system of scientific names applied to taxonomic units of animals, while the International Code of Zoological Nomenclature is the system of rules and recommendations governing the use of these names at the family-group, genus-group and species-group levels. It is consistent with the code to say that names may be objectively classified as either **available** or **unavailable**, the determination depending on the details of publication, etc. The **available** names may be further divided into **objectively valid** and **objectively invalid** names, and, in accordance with the Code, only the **objectively valid** names may be used for naming taxa.

GENUS-GROUP NAMES

In addition to the above **objective** classification of names, the **objectively valid** Genus-Group names may be further subjectively classified according to their use as names of genera, subgenera or unused synonyms. When a name is used for a generic- or subgeneric-level taxon it is said to be validated at the generic- or subgeneric-level, while if it is considered to apply to a taxon which has an older valid name, it is said to be invalidated as a junior subjective synonym.

In this catalogue the genus-group names are assigned one of the five letter codes [a-e] according to their status as **available/unavailable, objectively valid/invalid**, and depending on their use as the name for a genus, subgenus, or as an unused synonym, as defined by the following table.

Table I - Definition of Status Letter Codes [a-e]

Letter code	Nomenclatural status (objective)	Subjective use	Print	Indentation (in Part V)	Number of names (total)	Number of names (recent)

SPECIES-GROUP NAMES

Like the Genus-Group names, the **objectively valid** Species-Group names may be further subjectively classified according to their use as names of species, subspecies or unused synonyms. When a name is used for a species- or subspecies-level taxon it is said to be validated at the species- or subspecies-level, while if it is considered to apply to a taxon which has an older valid names, it is said to be invalidated as a junior subjective synonym.

In this catalogue the species-group names are assigned one of the five letter codes [a-e] according to their status as **available/unavailable, objectively valid/invalid**, and depending on their use as the name for a species, subspecies, or as an unused synonym, as defined by the following table.

BASIC LITERATURE

Journal titles have been checked in the *World List of Scientific Periodicals*, [b6481], and this data is included in Part XI. Bibliographic information on the authors has been found in Gilbert, 1958 (*A Compendium of the Biographical Literature on Deceased Entomologists*, [b2525]), Carpenter, 1945 & 1953 (*Bibliography of Biographies of Entomologists*, [b1266 & b1267]), Horn & Schenkling, 1928 (*Index Litteraturae Entomologicae, Serie I*, [b2864]) and Derksen & Scheiding-Göllner, 1965 (*Index Litteraturae Entomologicae, Serie II* [b1667]). The basic list of names was taken from Kirby, 1890 (*A Synonymic Catalogue of Neuroptera Odonata, or Dragonflies* [b3295]]), Davies & Tobin, 1984 (*The Dragonflies of the World, Volume I*, [b1572]), Davies & Tobin, 1985 (*The Dragonflies of the World, Volume II*, [b1573]), Tsuda, 1986 (*A Distributional List of World Odonata*, [b5981]), Tsuda, 1991 (*A Distributional List of World Odonata, 1991*, [b5982]), and from the Zoological Record. The fossil forms have been checked in Carpenter, 1992 (*Treatise on Invertebrate Paleontology. Part R. Arthropoda 4. Volumes 3 & 4: Superclass Hexapoda*, [b1261]).

PUBLICATION DATES OF GENUS-GROUP AND SPECIES-GROUP NAMES

The 10th edition of Linnaeus' *Systema Naturae* [b3755] marks the beginning of the consistent general application of binomial nomenclature in zoology. The date 1 January 1758 is arbitrarily assigned to that work, and taken as the starting point of zoological nomenclature. The following tables gives the number of names published in each 10-year interval from 1758 to the present. The data are broken down according to the nomenclatural status of the names, represented by the status codes [a-e], as previously defined.

DISTRIBUTION OF GENERA AND SPECIES BY FAMILY

The following table was suggested by Dr. Spuris. It gives the distribution of genera and species within the families of recent Odonata. Note that the species count includes fossil forms described in recent genera, so the totals will differ from those given in Table III.

MUSEUMS WITH TYPE SPECIMENS

The following list gives data on the location of type specimens, taken from various sources. Since only 5008 entries in the catalogue include information about the type specimen, it can be seen that the table is far from complete. Acronyms for museum names have, in general, been taken from Heppner & Lamas, 1982 (*Acronyms for World Museum Collections of Insects, with an Emphasis on Neotropical Lepidoptera*, [b2806]) and Arnett & Samuelson & Nishida, 1993 (*The Insect and Spider Collections of the World (Second Edition)*, [b0174].

CLASSIFICATION

The classification of the living forms follows, in general, the classification used in the catalogues of Davies & Tobin [b1572, b1573], with a few changes suggested by Dr. Garrison. However the Gomphioidea have been arranged in accordance with the treatment of Carle, 1986 [b1233]. The classification of the fossil forms follows Carpenter, 1992 [b1261], with a few minor modifications indicated by recent workers since Carpenter does not deal with the literature after about 1982.

SPELLING

The species-group names are spelled, in general, in the same way as they were spelled in the original descriptions. No attempt has been made to correct the termination of Latin or latinized adjectival or participial species-group names to agree in gender with the generic names they are currently associated with.

Dr. Matti Hämäläinen, who supplied me with some of his papers. Carl Cook, who supplied a detailed review of the arrangement of the Gomphidae. Dr. Zandis Spuris, who supplied me with a long list of additions and corrections, including many new entries for the bibliography. Miss April K. Walsh, who carefully compared a preliminary copy of Part VIII with the Tsuda Catalogue, thus bringing to light a number of additions and corrections. Mrs Carol Mittleman, who helped with the production of Part XIII.

I am sure I have forgotten some in this list, and for this I apologize.

PART II

SYNONYMIC LIST OF FAMILY-GROUP NAMES

INTRODUCTION

In this section the Family-group names are arranged in a synonymic list. The family-group names are printed **'bold'** if they are objectively valid, printed 'light' if they are objectively invalid, and in '*italics*' if they are unavailable. Names preceded by a '+' are considered synonyms (subjectively invalid) and are not used in the classification. Names preceded by a '†' pertain to fossil forms. The standard endings for Family-Group names are taken to be -oidea (superfamily), -idae (family), -inae (subfamily), -ini (tribe) and -iti (subtribe).

PART IV

SYNONYMIC LIST OF GENUS-GROUP NAMES

INTRODUCTION

In this section the Genus-group names are arranged in a synonymic list. The genus-group names are printed 'bold' if they are objectively valid, printed 'light' if they are objectively invalid, and in '*italics*' if they are unavailable. Each group is preceded with a key to the higher classification which can easily be read with the help of Part II. For example, **Acanthaeschna** is in the group headed **Anl:Aes:Aes:Bra:Brachytronini**, which can be read as Suborder Anisoptera, Superfamily Aeshnoidea, Family Aeshnidae, Subfamily Brachytroninae, Tribe Brachytronini. The fossil genera are listed in alphabetic order at the beginning of the list. However some addition information about their placement may be found in Part III. The correct position of some genera is not known, and these have been placed in groups with incomplete headings. For example, the placement of Idlogompholdes is not known to the tribal level, so it is placed under the incomplete heading **Anl:Gom:Gom:Gom:**.

ABBREVIATIONS

The following abbreviations are used in this section.

H.....Homonym
ICZN.....International Commission on Zoological Nomenclature
IOS.....Incorrect Original Spelling
ISS.....Incorrect Subsequent Spelling
JOS.....Junior Objective Synonym
NN.....Nomen Nudum
PD.....Pending Decision (by the ICZN)
PS.....Published in Synonymy
RC.....Rejected by the Commission (ICZN)

PART V
INDEX TO BIBLIOGRAPHIC CITATIONS
FOR
GENUS-GROUP NAMES

INTRODUCTION

This section is straightforward and needs little introduction. It consists of an index to all those publications which contain original descriptions of Genus-group names, original descriptions of Type-species of Genus-group names or valid Type-species designations of Genus-group names. The particular type of citation is indicated in the first column, where the status letter codes [a-e] are given if the citation is to the original description of a name, TS is given if the citation is to the original description of the Type-species, or TM is given if the citation is to the Type-species designation.

PART VII
SPECIES-GROUP NAMES

INTRODUCTION

In this section the species-group names are arranged in alphabetic order. If two names are spelled the same, they are ordered by date of publication, and if they have the same publication date they are arranged by the author's name.

ABBREVIATIONS

The following abbreviations are used in this section.

ab. ..... abberation
CG ..... Current Genus
Dist: ..... Distribution
f. ..... form
H ..... Homonym
IFS ..... Infrasubspecific
JOS ..... Junior Objective Synonym
MID ..... Misidentification
NN ..... Nomen Nudum
OD ..... Original Description
OS ..... Objective Synonym
PS ..... Published in Synonymy
Refs ..... References
SS ..... Subjective Synonym
TypeL ..... Type Locality
